The Future of Asset Management

“Worldwide, by 2025 we expect AI technologies to reduce employees in the capital markets by 230,000 people. **The asset management industry** will shrink most, with around 90,000 people being replaced by machines.” (Optimas, 2018)

The Future of Asset Management

Change is Coming!

Deep Learning: Financial Time Series Prediction

- Welcome to “Predicting Financial Time Series using Deep Learning”
- This session designed to learn a framework for predictive trading using deep learning
- We mainly focus on stock / coin price prediction based on deep learning, pursuing the most essential algorithms

Motivation of This Session

- Don't have a boss. Be the boss with AI.
- What is the most important thing of systematic trading?
 - Alpha generating capability

“**Alpha** is a measure of the active return on an investment, the performance of that investment compared with a suitable market index. An alpha of 1% means the investment's return on investment over a selected period of time was 1% better than the market during that same period.” (wikipedia)

- Why Deep Learning Approach?
 - Deep Learning performs much better than other traditional methods in predictive analytics

Goals of This Session

- Understand the key issues with financial time series predictions and advantages / disadvantages of machine learning
- Learn how to implement FNN, CNN and RNN for financial time series predictions on Google Colaboratory
- Learn which metrics could be important for robustness of time series prediction algorithms
- Learn how to implement your own neural network models with comprehensive cryptocurrency data

Why We Use Tensorflow Keras API?

- Keras is a simple, high-level neural networks library
- Proper level of abstraction for this session
- You can probably learn the basics of Keras in 5-10 minute

Four Modules of This Session

- Module 1. Getting Started + Google Colab Setting
- Module 2. Learning Tensorflow Keras API
- Module 3. Implementing Time Series Prediction Models
- Module 4. Implementing Time Series Prediction Models (More Comprehensive)

How to Study by Yourself in This Session

- Write code
 - There will be suggested exercise with template codes
 - At the end of each module, solutions will be given
 - But I strongly recommend write the code by yourself
- Using the Q&A is a must (I want you to succeed)
- Where to get the code and data (will be updated weekly)
 - <https://github.com/jonghkim/financial-time-series-prediction>
 - git clone url or download zip from page

Thank you ☺

Appendix 1. For Machine Learning Beginner

- Although we will review essential concepts of machine learnings, this session recommends to study below lectures in parallel for beginners
- 모두를 위한 딥러닝 강좌
